PROFILE

I build web, mobile and SaaS apps — from greenfield to legacy-system integration, including Brazilian e-invoicing (NFCe, NFe, MDFe). Since 2019 I've delivered solutions for field sales, financial controls, e-invoicing, internal dashboards, automations and enterprise integrations. I work across Delphi and modern stacks (React, Next.js, React Native), with APIs in Node.js, AdonisJS and PHP/Laravel running on Linux and Windows Server.

EXPERIENCE

Software Engineer · FG Sistema e Informática · Cuiabá, MT, Brazil — Jan 2026 — Present

Promoted to developer after meeting the requirements during my L2 phase. Currently responsible for the mobile and web sector: Ctrix Auto (auto shop app), Accountant Panel (automated monthly XML collection between support and accountant), an internal e-invoicing API (MDFe, NFCe and NFe) and the institutional website (listed under Clients). I work with Delphi when integration with the existing ERP is needed.

React · React Native · Node.js · AdonisJS · Delphi · MySQL · Docker · NFCe · NFe · MDFe

L2 Technical Support · FG Sistema e Informática · Cuiabá, MT, Brazil — Jan 2024 — Jan 2026

Also acted as supervisor of the support team. Mixed work between support, programming and infra: Delphi routine adjustments to fix system flows, maintenance of legacy MySQL databases (4.1, with some clients still on 4.0), server and network configuration at customer sites, hardware maintenance and direct customer support. The more complex tickets and deployments usually came to me.

L2 Support · Delphi · MySQL · Linux · Deployment

Software Engineer · Cacttus Brasil · Cuiabá, MT, Brazil — Jul 2021 — Jan 2024

First full-time developer position, after a phase as a freelancer building simple websites and on-demand apps. Worked on the company's corporate web system (Node.js/Express + React), which during this period started issuing NFe e-invoices in production. Also built a React Native field-sales app and the institutional website (listed under Clients).

Node.js · Express · React Native · React · PostgreSQL · NFe

Support Analyst · UNIBRASIL Sistemas · Cuiabá, MT, Brazil — Jan 2019 — Jun 2021

First professional role after self-taught studies. L1 support for a legacy ERP: usage tickets, customer questions and occasional database fixes (Firebird). Joined on-site deployments and helped with user training. The system handled NFCe, NFe and SPED — my first hands-on with Brazilian tax compliance.

L1 Support · Firebird · NFCe · NFe · SPED · Deployment · Infrastructure

SELECTED PROJECTS

Emittly — *In development*

Tax-compliance SaaS without the complexity of a full ERP. Customers issue Brazilian e-invoices (NFCe, NFe and MDFe) straight from the browser, with Stripe billing and a containerized architecture — PHP/Laravel API using the sped-nfe library and a React frontend.

React · PHP · Laravel · PostgreSQL · Docker · Stripe · sped-nfe

SecureVault · github.com/rafaelnassar/securevault

Local-first credential manager with AES-256 encryption. Built with Tauri for maximum desktop performance, focused on privacy and securing cryptographic keys and digital assets.

React · TypeScript · Tauri · Rust · SQLite · Tailwind

Painel do Contador *— under NDA*

Replaces the monthly manual collection of tax XML files. Previously support had to access each client's machine and email the files to the accountant. Now a Node.js sync agent uploads everything to Supabase Storage, and the accountant downloads what they need, when they need — without depending on support or the client.

React · Node.js · Supabase

Ctrix Auto *— under NDA*

Full mobile app for auto repair shops. Covers quotes, service orders, approval-by-link, and real-time status tracking for the shop's customer — including a waiting-room TV display module. Everything integrated with a 20-year-old legacy system.

React Native · Expo · Node.js · PostgreSQL

CLIENTS
